RE: Tennessee Wastewater Systems, Inc.'s Petition to Amend Certificate of Public Convenience and Necessity to Provide Wastewater Utility Services (Docket No. 05-00162).

Dear Mr. Pickney:

In order for the Authority to complete its review of Tennessee Wastewater Systems, Inc.'s ("TWS") amendment to its Certificate of Convenience and Necessity ("CCN") to provide wastewater utility services to a portion of Fentress County known as the Fentress Service Area, you are requested to provide the following additional, clarifying information. **It is important for your responses to be complete and precise, using all information that is available to you.** This docket will then proceed based on the information provided.

1. Provide a topographic map, 7.5-minute quadrangle format (available through TVA) plotting the exact location of the proposed treatment plants including the location of the drip cell lagoon treatment and the drip dispersal system for both the Clarkrange system and the Highlands system, as well as the initial proposed territory to be served by each. Include the estimated number of residential, commercial and industrial customers each system will initially serve. In your last response dated July 22, 2005 question #1, you stated that there were too many variables to do meaningful estimates on the type and number of customers. Provide as much information on these variables as is available to you, and your best estimate.
2. Provide map and parcel numbers of each area that the two (2) wastewater systems propose to serve, as well as the number of acres in each parcel. You stated in your data response, filed on July 25, 2005, that there were too many to list accurately. Provide a list as accurate as possible.
3. Provide an estimate of the maximum capacity of each of the systems being installed. In your data response, filed on July 25, 2005, you stated that the

T.R.A. DOCKET ROOM

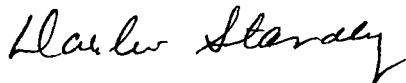

estimates of 500,000 gallons for the Clarkrange system and 60,000 gallons for the Highlands system were subject to change. What factors would cause these estimates to change?

4. Who will fund the development of each system? In your response filed July 25, 2005 to question # 7 you stated that the funding for the two systems would be done by those constructing the systems and collection lines. Provide the names and addresses of who will be constructing the systems and collection lines of each system.
5. Provide a "Letter of Intent" from Fentress County and/or other developer of each system, indicating the intention to contract with TWS for the construction and operation of the systems and that ownership of the system will transfer to TWS, once construction is complete as was requested in the September 28, 2005 data request. Your response stated that "letters of need" from the county and Allardt Land Company were provided. "Letters of Intent" to develop a wastewater system for TWS to own and operate must come from the funding developers of the systems. Is Allardt Land Company the funding developer of the Highlands? If not, who is the developer of the Highlands? Who is the funding developer of the Clarkrange system?
6. Provide a copy of the Highlands system Final TDEC Permit, SOP #04040.
7. Upon completion of each system, the Highlands and Clarkrange, will they have the capacity and ability to serve the entire Fentress Service Area that is being requested? Explain fully your response.

It is requested that this information be provided no later than 2.00 P.M. on Friday, December 2, 2005 and you reference Docket No. 05-00162 on the response. In accordance with TRA rules, submit either thirteen (13) written copies of your response or four (4) written copies and an electronic version.

Should you have any questions regarding this request, please contact Patsy Fulton at 615-741-2904 ext. 193.

Sincerely,

Darlene Standley, Chief
Utilities Division
